

## **UIL Theatrical Design Contest LEAGUE HIGH SCHOOL STAGE DIMENSIONS**

Students participating in SET DESIGN will be designing their set for production on the League High School stage. It is modeled after the flexible space of the Wyly Theatre in the AT&T Performing Arts Center in Dallas. This allows maximum flexibility for creativity. The measurements for our space are included below and are such that can be drafted in 1/4" scale on the contest required 11"x17" page. Essentially you have the side and back walls of the space, the height of the flex grid, and the stage edge to work with—the blank slate of a stage box. It is expected that you will design for a proscenium space, but you determine the look you want within the following dimensions:

STAGE WIDTH: 60'0"  
STAGE DEPTH: 32'0"  
GRID HEIGHT: 28'0"

Because of the flexible design, you may position your proscenium, legs, masking...etc where you choose. You may also determine the size and design of your proscenium.

Pictured here is the WYLY THEATRE set up for proscenium production:

Shown here is a drafted version of the stage on 11x17 paper in 1/4"=1'0" scale. Note the 1/4" border around the paper and the title block.
