***** UIL A # 27** This problem needs to be tossed as no correct answer is given as a choice. $y=\sqrt{5/3}$ is a horizontal asymptote and there are no places of intersection with the asymptote and the function.

***** UIL District # 23** The original key had “B” as the answer. I noticed the error and notified the UIL office about a month before the district meets started. The test and key had already been sent to the printer, so the UIL office sent a correction to each district director stating that the correct answer is “E.” I hope the correction made it to your grading room.
