#### **Innovation as Adaptation:** NATC and Emerging Technologies JUNE 11, 2021

raina-technologies

- # However, NATO and the transatlantic allies are neither the only nor the most agile actors investing in emerging and disruptive technologies. China and Russia...invest substantially [and accelerated] adoption of these technologies in military applications.
- st To maintain its strategic advantage against China and Russia, NATO needs to become an agent of innovation and be more agile and strategic in supporting allies to jointly exploit new technologies for deterrence, defense, and resilience purposes.
- \* NATO has prioritized EDTs and signaled it has joined "the technological adoption race" against China and Russia. I
- # Much work remains to be done. Allies remain divided on the ethical and legal specifics of the military use of EDTs and by their national-industrial preferences.

## **Better Technology**

- \* Tools leverage labor and
- \* As improved tools—smarter
- \* A.I. tech. allows fewer people to
- \* Farming, mining, manufacturing, military, defense, education, programming, medical, elder care...

#### ECONOMIC FREEDOM **RTIFICIAL INTELLIGENCE**

#### **Technology Trade Offs**

Faster, Smaller, Safer, Smarter

- # Smarter technologies: smartphones, smart cars, smart vacuum cleaners...
- # A.I. robots programmed to learn and adapt.
- # Smarter tanks, ships, robots for: warfare...
- # Trade offs: tasks/jobs/mistakes by A.I. tech replace risky tasks/jobs/mistakes by people.
- # But w/ military A.I. will putting robots rather than soldiers as risk promote use?
- # Purely defensive A.I. military technologies?

Ven Robots were supposed to take our jobs Instead, they're making them worse.

## **Certified Safe A.I.: UL Approved**

#### USFG reform/regulation vs. NGO certification

- \* Regulate or Certify A.I. products and services as safe (and fair)?
- \* Separate from for-profit companies are Non-Government Organizations (NGOs): clubs, charities, churches, universities, foundations, and associations
- \* Plus technology standards groups for tech industry.
- \* What Does It Mean to Certify an AI Product as Safe?, (Dataversity, July 16, 2018), James Kobielus says fear about A.I. technologies is similar to past fears of electricity when first developed and introduced

- software and machines—raise productivity, wages increase.
- produce more across the economy

Faster, Smaller, Safer, Smarter

### A.I. or Machine Learning?

- Artificial-intelligence systems are nowhere near advanced enough to replace humans in many tasks involving reasoning, real-world knowledge, and social interaction.
- They are showing human-level competence in low-level pattern recognition skills,
- but at the cognitive level they are merely imitating human intelligence, not engaging deeply and creatively, says Michael I. Jordan, a leading researcher in AI and machine learning.

Stop Calling Everything AI, Machine-Learning Pioneer Says > Michael I. Jordan explains why today's artificial-intelligence systems aren't actually intelligent
