

**University Interscholastic League  
Computer Science Competition**

**2019 Invitational Programming Materials –  
Instructions for Installing the UIL Judging Environment**

*The following instructions apply **only** for contests that will use the DOS-based judging environment provided with the contest materials. If you are using PC<sup>2</sup> for your contest, or any other judging method, please disregard.*

The install.bat file provided with your materials will not run correctly from a downloaded package. Follow the steps below to install the necessary files without using install.bat.

1. Create a folder at the top level of your C drive named UILProgramming.
2. Inside your downloaded package for Computer Science is a folder labeled InstalledFiles. Open this folder and copy all of its contents to the UILProgramming folder you created.
3. The judging environment should now run as normal. Follow the instructions provided for running the judging environment.
